

NTT Communications

VLink

Streamline your connectivity with NTT Communications.

Network Management, Simplified

Networks with a tiered communication structure suffer from high cost and lack of flexibility. NTT Communications is here to help.

As a business, you probably use more than one technology platform for your Internet access. You use Ethernet to transfer mission critical data internally, use private, site-to-site networks for connectivity between corporate sites, remote offices, and business partners, and the Internet for public transfer. But this model isn't optimal.

NTT Communications' VLink is a virtual point-to-point connection operating over our extensive Global IP Network. It's a Layer 2 Virtual Private Network (L2VPN) solution created to decrease cost and increase flexibility. And it reduces the need to manage disparate technology platforms on your network. Connectivity between Enterprise sites that's more flexible, cost-effective, secure, and reliable, that's the NTT Communications' VLink solution.

PROBLEM SOLVED

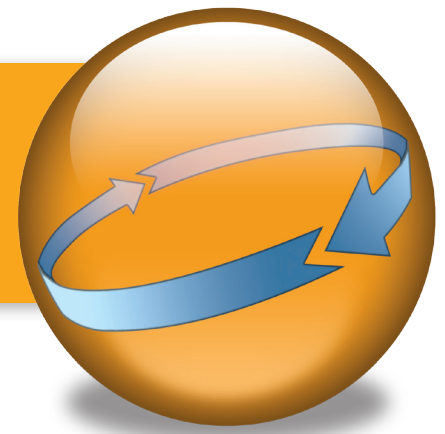

Private Line, Frame Relay, and ATM networks suffer from the shortcomings of the existing Layer 2 solutions. Aside from their high cost, they are inflexible in their abilities. They're slowly being replaced by newer, better technologies. And NTT Communications is ahead of the curve. Our VLink melds together the flexibility and scalability of Layer 3 technologies with the dedicated traffic paths and management capabilities of Layer 2 technologies.

We use Multi Protocol Label Switching (MPLS). MPLS can be used to carry many different kinds of traffic, including IP packets, native ATM, SONET, and Ethernet frames. By taking advantage of MPLS and our outstanding Global IP Network, we have the ability to offer the best of both layers. Only NTT Communications' VLink solution encapsulates this powerful combination.

NTT Communications

VLink

Streamline your connectivity with NTT Communications.

With our VLink solution, you can leverage the flexibility of your existing LAN configuration. That's with improved network performance and increased service quality. With a point-to-point, private line service that runs at IP transition prices, across our backbone, and from one POP to another, you're truly interconnected with NTT Communications' VLink service.

YOUR ADVANTAGES

Cost Effectiveness

NTT Communications' VLink solutions deliver substantial cost savings over traditional private networks. With NTT Communications, enterprises can converge multiple services, such as remote access and site-to-site networks, over a single IP connection rather than private line "mesh" connections. That's all while additional services can be layered over an NTT Communications' VLink (such as voice and video) without creating separate networks.

Security

With our VLink solution, you can easily encrypt parts or all of your traffic to prevent access by non-authorized users. We provide you with a dedicated path that protects your traffic between end points.

Flexibility

The NTT Communications' VLink solution provides you with a rapid and flexible upgrade path for your existing network. You can utilize your current hardware and Internet access as a part of our VLink solution.

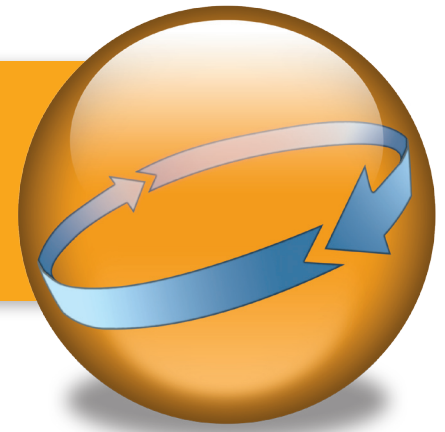

Rapid Service Delivery

Our VLink solution greatly reduces the time to market for new MPLS features and functionality. Virtual circuits can quickly be defined for connection to local loops.

NTT Communications

VLink

Streamline your connectivity with NTT Communications.

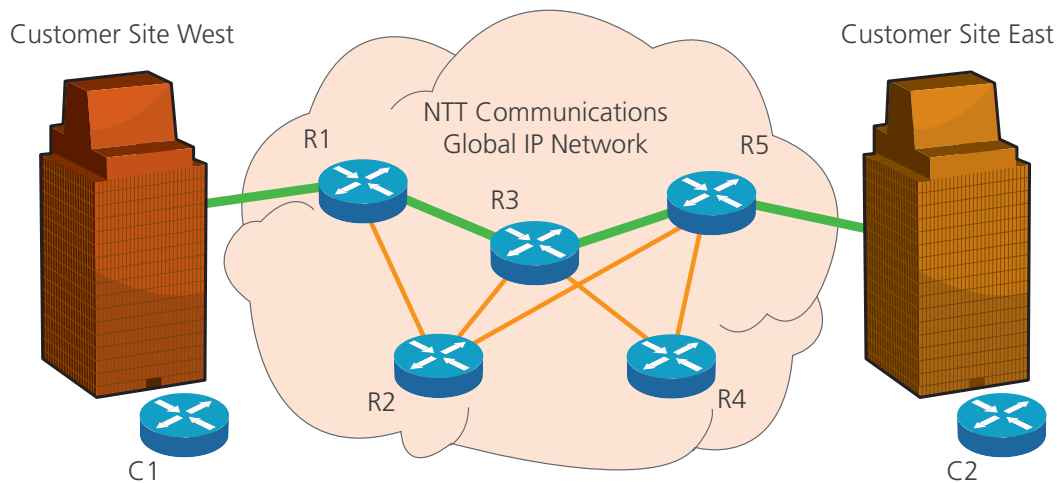

Scalable

Unlike legacy solutions, NTT Communications' VLink solution seamlessly scales with your needs up to 1Gbps.

Applications

ISPs and Content Providers on the East Coast of the U.S. can now appear to have connections on the West Coast for peering or traffic management. Enterprises can establish data backup and business continuity plans from multiple geographic sites while keeping costs in check. With NTT Communications' VLink solution, other Enterprises are able to create a single LAN extending across multiple cities.
