

NTT Communications

Intrusion Protection Services

Get protection from the inside out with NTT Communications.

Detect And Prevent

Attacking Internet connectivity. Probing for vulnerable network entry points. Website defacement attempts. Denial-of-service attacks. Those are just a few examples of the malicious activity that threatens the integrity of your network every day.

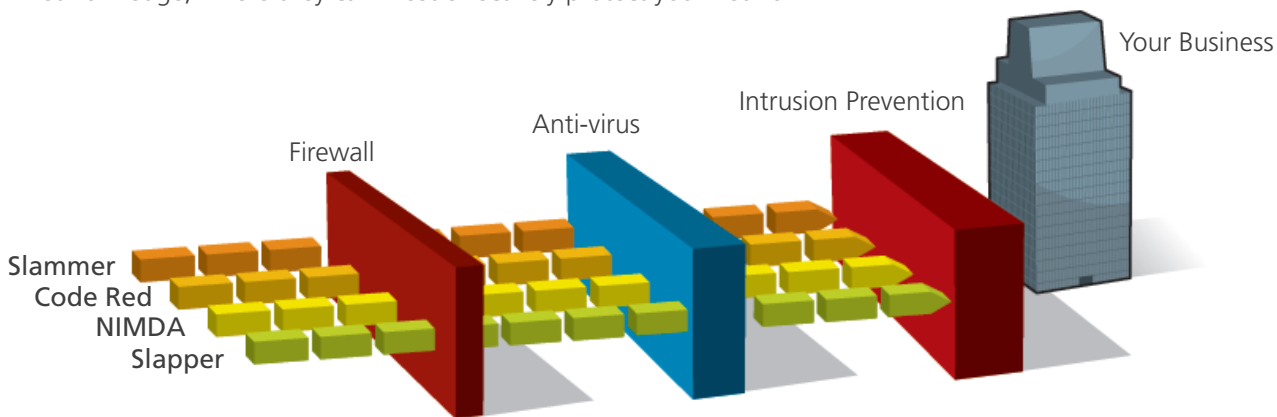

Many organizations deploy Firewalls as their sole protection against malicious intruders. But Firewalls alone cannot detect and stop the complex, blended attack patterns widely seen today. Your business needs a second line of defense.

NTT Communications offers outstanding Unified Threat Management (UTM) Intrusion Detection (IDS) and Intrusion Prevention Services (IPS) to all of our customers to ensure your network is truly protected.

THE PROBLEM. THE SOLUTION.

In addition to the limitations of Firewall security, many IT Administrators are experiencing information overload from their network devices. They receive large volumes of network activity but don't have the ability to interpret the data in real time and respond accordingly.

NTT Communications' UTM Intrusion Detection and Prevention architecture analyzes content and behavior in real time, enabling key applications to be deployed at the network edge, where they can most effectively protect your network.

NTT Communications

Intrusion Protection Services

Get protection from the inside out with NTT Communications.

Our UTM threat prevention system creates a stronger defense against both known and unknown attacks. By combining a set of signatures of known attack patterns and behavior-based analysis, we help to improve your response to malicious activity across your network.

And our continuous Security Operations Center monitoring and formal Incident Response processing provides you with a comprehensive threat management program.

NTT Communications is security you can count on.

THE BENEFITS

With NTT Communications' UTM IDS/IPS solutions, you get:

- A Single Customized Online Portal
 - Our easy-to-use online portal provides you with reports that meet regulatory requirements and help even your non-technical audience understand what's happening on your network.
- Signature and Anomaly Based Detection and Prevention
 - Our database, containing millions of restricted websites, is continuously updated to block even the most recent websites with embedded malware.
- 24x7x365 Monitoring & Support
 - Our Security Operations Engineers continuously monitor and analyze your network in real time to make sure your devices are up-to-date with the latest in global signatures. Technical Support is available for you day and night to guarantee you get the support you need, when you need it.
- Device Change Availability
 - Our Security Operations Engineers are always available to tune your devices and to meet the changing needs of your network.
